

GreenTech

Biofuel Briquettes and Fuel Efficient Stoves

Use Biofuel Briquettes with Fuel Efficient Stoves and Save our Forests!

Demonstration Sessions!

Come and see how the briquettes are produced and used in fuel efficient stoves. Every Wednesday, 11am at the plant in Kololi behind TSU, entrance also through Green Mamba Garden Restaurant, 3 min walk from Senegambia Beach Hotel.

Combined use of Briquettes and Fuel Efficient Stoves saves you cost, time and efforts !!!

GreenTech is a newly established company in the Gambia, dedicated to provide sustainable environmental solution to households, industries and institutions.

Since July 2011 GreenTech produces high quality fuel briquettes from groundnutshells and promotes fuel efficient stoves for cooking and heating purposes in households, restaurants and industries. As the combined briquette/stove unit needs less fuel input than common cooking units, it reduces cooking costs, emissions and the exploitation of forests. The briquettes are pressed by a heavy duty machine, producing 800kg/h. The stoves are produced with recycled metal by local weldermen. Briquettes and stoves are available on stock.

For more information, please visit our website or join our weekly demonstration sessions at the plant.
